

# One Point Perspective

## Practice

1. Draw the horizon line (your eye level in regard to the image).
2. Draw a **box** above, below, or in the middle of the horizon line.
3. Estimate the angle of the slope to the horizon line from the top of the edge nearest you and use that to determine the **vanishing point**.
4. Use a ruler to draw lines from every corner of the square to the vanishing point.
5. Draw lines to designate the receding sides of the box.
6. Draw lines to indicate the far end of the box.
7. Darken all lines that are useful to your composition and erase all unnecessary guide lines.
8. Notice you can actually see the interior lines in the gold fish tank, but you would not see those lines in the cracker box.
